SUMMARY

Backend Engineer specializing in Java and Spring Boot with a focus on building secure, production-ready backend systems. Experienced in designing REST APIs with Spring Security (JWT), role-based authorization, real-time communication using WebSockets, and relational data modeling with PostgreSQL. Hands-on experience integrating third-party and AI-driven APIs and optimizing backend performance using Redis caching.

TECHNICAL SKILLS

Languages: Java

Backend: Spring Boot, Spring Security (JWT), REST APIs, WebSockets

Data: PostgreSQL, Hibernate/JPA, Redis

Infrastructure: Docker

Testing and Documentation: JUnit 5, Mockito, SpringDoc OpenAPI

EXPERIENCE

AI Code Evaluation Engineer — Code Human Preference (Claude-HFI) Mar 2025 – Present

Contract

- Worked on a client project focused on evaluating and improving AI-generated software solutions by testing Claude-HFI across real development codebases.
- Designed complex engineering prompts and follow-up tasks to assess model performance in backend development, architecture decisions, debugging, and production-level code quality.
- Compared multiple AI-generated implementation trajectories for the same engineering problem, performing deep technical analysis of code quality, maintainability, scalability, and best-practice alignment.
- Wrote detailed professional evaluations including pros/cons analysis, architectural trade-offs, and final decision reports determining the stronger implementation path.

Freelance Backend Developer (Java / Spring Boot) Aug 2025 – Sep 2025

Contract

- Designed and delivered a production-ready backend for a custom e-commerce platform using Spring Boot 3 and Java 17.
- Collaborated directly with the client on requirements, iterative improvements, and production deployment.
- Designed data persistence using Hibernate/JPA with PostgreSQL.
- Improved reliability through unit and integration testing with JUnit 5 and Mockito.
- Collaborated directly with the client to define backend requirements, scope, and delivery milestones.

Backend Developer - Academic IoT Project Sep 2022 – Sep 2023

Technical Faculty, University of Bihac

- Developed backend services for an IoT-based smart feeder system using Spring Boot.
- Designed REST APIs to manage device control and automated workflows.
- Improved backend performance by approximately 35 percent through Redis caching strategies.
- Increased system stability by implementing unit and integration tests with JUnit and Mockito.

PROJECTS

LuxRoses - Production E-commerce Platform | *Java, Spring Boot, PostgreSQL, React, Vercel, Railway*

- Designed and delivered a production-ready full-stack e-commerce platform for a local business client.
- Implemented secure session-based authentication with CSRF protection for the administrative panel using Spring Security.
- Developed order management system including cart workflow, image uploads, and email notifications.
- Deployed frontend to Vercel and backend with PostgreSQL and persistent volumes to Railway using environment-based configuration.

Biddora - Real-Time Auction Backend | *Java, Spring Boot, JWT, WebSockets, PostgreSQL, Redis, Docker*

- Built a real-time auction backend with live bidding using WebSockets.
- Implemented JWT-based authentication and role-based authorization with Spring Security.
- Designed automated auction winner determination and bid validation logic.
- Optimized read-heavy operations using Redis caching.
- Containerized the application using Docker and documented APIs with SpringDoc OpenAPI.

SummonerAI Coach - Backend Analytics and AI Integration | *Spring Boot, External APIs, OpenAI*

- Designed backend services for processing external API data and generating AI-driven insights.
- Integrated third-party APIs and OpenAI services for contextual analysis generation.
- Implemented data transformation pipelines and structured REST API responses for frontend consumption.

EDUCATION

BSc in Computer Science (Software Engineering)

Expected 2026

Technical Faculty, University of Bihac
